How to Get Started 13

Let's Build Something Great 14

# Introduction

Thank you for reviewing my service catalog. This document provides a comprehensive overview of the professional services I offer, each designed to deliver measurable business value through modern engineering practices. With over 15 years of experience and 150+ projects delivered to clients worldwide, I bring a pragmatic, production-focused approach to every engagement.

My services span the full spectrum of modern software engineering: from self-hosted AI agents that eliminate recurring API costs, to high-performance backend optimization that scales systems to handle 10,000+ concurrent users, to custom ERP solutions that digitize manufacturing operations end-to-end. Each service is structured with clear deliverables, transparent pricing, and defined timelines so you know exactly what to expect before we begin.

Every service section in this catalog is written for two audiences: business owners who need to understand the value and ROI, and developers or CTOs who want to evaluate the technical approach. I believe in complete transparency — the technologies, architectures, and methodologies I use are all documented here.

# Services at a Glance

| # | Service | One-Time | Weekly | Timeline |
|---|---|---|---|---|
| 01 | Self-Hosted AI Agents (Zero API Costs) | $599 | $149/wk | 1 week |
| 02 | High-Performance Backend & Database Scaling | $899 | $199/wk | 1–2 weeks |
| 03 | Modern Full-Stack Web App Development | $2,999 | $249/wk | 4–8 weeks |
| 04 | Custom ERP & Manufacturing Automation | $4,999 | $299/wk | 8–12 weeks |
| 05 | Open-Source ERP & CRM Implementation | $3,999 | $249/wk | 4–10 weeks |
| 06 | Algorithmic Trading & FinTech Automation | $1,499 | $199/wk | 2–4 weeks |
| 07 | DevOps, Security & Cloud Hardening | $699 | $129/wk | 1–2 weeks |
| 08 | eCommerce Reliability & Server Maintenance | $399 | $99/wk | Ongoing / Monthly |

Table 1: Complete service listing with pricing and delivery timelines.

# Service 01: Self-Hosted AI Agents (Zero API Costs)

## 01 Self-Hosted AI Agents (Zero API Costs)

Your private digital employee — running 24/7 on your own server without subscriptions.

| One-Time | Weekly | Timeline |
|---|---|---|
| $599 | $149/wk | 1 week |

### For Business Owners

A secure, 24/7 AI assistant that lives on your server. It handles SEO monitoring, market research, and customer inquiries using free open-source models — meaning no monthly bills from OpenAI or Claude. Your business data never leaves your private VPS, giving you complete data privacy and autonomous operation around the clock.

- Zero Monthly API Fees: Uses Gemma 4 E4B for high-tier reasoning at no extra cost
- Complete Data Privacy: Your business data never leaves your private VPS
- Autonomous SEO & Research: An agent that crawls the web and optimizes your site while you sleep
- Scaling without Headcount: Automate repetitive Python/Django tasks and data entry

### For Developers & CTOs

Production-grade deployment of Autonomous Agents using OpenClaw and Ollama. Features native tool-calling with Gemma 4, localized RAG, and seamless integration with Django/FastAPI backends. Dockerized environment with CloudPanel Reverse Proxy and SSL ensures secure, production-ready deployment.

- Advanced Orchestration: OpenClaw gateway for multi-step task execution
- Gemma 4 Native Function Calling: High-speed reasoning with 128K context window
- Local Vector Search: Integrated RAG pipeline using ChromaDB/PostgreSQL pgvector
- Secure Deployment: Dockerized environment with CloudPanel Reverse Proxy & SSL

### What You Receive

- Private AI Agent (OpenClaw) deployed on your VPS
- Ollama Backend with Gemma 4 E4B optimized for 8GB+ RAM
- Custom SEO & Web-Crawl skills integrated
- Secure CloudPanel Dashboard for monitoring and logs
- Handover guide for adding new business knowledge

### Technology Stack

Gemma 4 | OpenClaw | Ollama | Django/FastAPI | Docker | CloudPanel

# Service 02: High-Performance Backend & Database Scaling

02

## High-Performance Backend & Database Scaling

Scale your infrastructure to 10K+ concurrent users with sub-50ms latency.

| One-Time | Weekly | Timeline |
|---|---|---|
| $899 | $199/wk | 1–2 weeks |

### For Business Owners

Slow backends kill conversions. I transform sluggish systems into high-speed engines that handle massive traffic spikes without crashing. Using advanced asynchronous architecture, I ensure your business remains online and responsive 24/7. The result is zero-downtime scaling, sub-50ms API response times, and significantly reduced infrastructure costs through optimized resource usage.

- Zero-Downtime Scaling: Handle 10x your current traffic effortlessly
- Sub-50ms API Response: Instant page loads that keep customers engaged
- Slashed Infrastructure Costs: Optimized resource usage reduces monthly VPS bills
- Real-Time Reliability: Asynchronous task handling for smooth background processing

### For Developers & CTOs

Architectural-level optimization of Python-based backends (Django/FastAPI). Implementation of non-blocking I/O, advanced PostgreSQL/MySQL indexing, and distributed task queues to eliminate bottlenecks. Real-time bi-directional communication using Django Channels for WebSockets, with comprehensive load testing and stability reporting.

- Async Architecture: Transitioning sync blockers to High-Performance Async Python
- Advanced Query Tuning: Deep EXPLAIN analysis for PostgreSQL and MySQL optimization
- Distributed Task Management: Celery & Redis integration for heavy background logic
- Real-Time WebSockets: Bi-directional communication using Django Channels

### What You Receive

- Comprehensive Backend Audit & Performance Benchmarks
- Database Schema Refactoring & Strategic Indexing
- Redis Caching & Celery Background Worker setup
- Nginx Hardening & Dockerized Scaling Strategy
- Post-Optimization Load Testing & Stability Report

### Technology Stack

Python (Async) | PostgreSQL | Redis | Celery | Nginx | Docker

# Service 03: Modern Full-Stack Web App Development

03

## Modern Full-Stack Web App Development

High-performance applications built for speed, SEO, and massive scale.

| One-Time | Weekly | Timeline |
|---|---|---|
| $2,999 | $249/wk | 4–8 weeks |

### For Business Owners

Generic websites are slow and lose customers. I build custom web applications — from complex inventory portals to high-converting e-commerce engines — using modern Island Architecture. The result? Instant load times, perfect SEO scores, and a system that fits your business like a glove. Every project includes a responsive, beautifully crafted UI with enterprise-grade reliability on a securely hosted VPS.

- Ultra-Fast Performance: Optimized with Astro and HTMX for near-instant interaction
- Built-in SEO Advantage: SSR and Static Generation ensure you rank higher on Google
- Responsive & Modern UX: Beautifully crafted with TailwindCSS or Bootstrap for any device
- Enterprise-Grade Reliability: Securely hosted on high-speed VPS using Docker isolation

### For Developers & CTOs

Architecting sophisticated web ecosystems using Nuxt 3 and Astro for the frontend, powered by Alpine.js and HTMX for reactive, low-latency client-side logic. Lightweight interactivity eliminates heavy JavaScript bundles. Rapid UI development with TailwindCSS and Bootstrap 5. Deployment via Dockerized microservices on optimized Linux VPS environments with full CI/CD pipeline integration.

- Hybrid Architecture: NuxtJS (Full SSR) and Astro (Island Architecture) for maximum speed
- Lightweight Interactivity: Alpine.js & HTMX to eliminate heavy JavaScript bundles
- State-of-the-Art Styling: Rapid UI development with TailwindCSS and Bootstrap 5
- DevOps Excellence: Containerized deployment with Docker Compose on dedicated VPS

### What You Receive

- Complete Full-Stack Application (Frontend + Python/Node Backend)
- High-Performance Database Design (PostgreSQL/MySQL)
- Optimized UI/UX with TailwindCSS/Bootstrap
- Dockerized Production Deployment on VPS with SSL
- Post-Launch Performance Audit & SEO Optimization
- 45-Day Priority Technical Support

### Technology Stack

NuxtJS | Astro | HTMX | Alpine.js | TailwindCSS | Docker | VPS

# Service 04: Custom ERP & Manufacturing Automation

04

## Custom ERP & Manufacturing Automation

Digital transformation for factories — from production floor to final export.

| One-Time | Weekly | Timeline |
|---|---|---|
| $4,999 | $299/wk | 8–12 weeks |

### For Business Owners

Ditch the messy spreadsheets. I build custom ERP systems designed specifically for manufacturing (Garments, Textiles, Industrial) that track raw materials, production stages, and worker efficiency in real-time. Gain 100% visibility over your factory floor from a single dashboard with smart inventory management, automated alerts, and data-driven decision making through one-click export reports.

- Eliminate Production Bottlenecks: Real-time tracking of every garment/unit stage
- Smart Inventory Management: Automated low-stock alerts and QR-based tracking
- Data-Driven Decision Making: One-click export of production and payroll reports
- Reduced Operational Waste: Digital workflows that catch errors before they cost money

### For Developers & CTOs

High-concurrency ERP architecture built with Django Ninja for lightning-fast API performance and Astro for real-time monitoring dashboards. Includes IoT sensor integration (MQTT), barcode/QR logic, and automated Celery tasks for heavy reporting. Role-Based Access Control (RBAC) with detailed audit logging ensures

industrial-grade security and compliance.

- Django Ninja Core: Type-safe, high-performance REST APIs with automatic OpenAPI docs
- Real-time IoT Integration: Support for PLC, MQTT, and sensor-based production counting
- Edge-Ready Frontend: Astro and Alpine.js for lightweight, instant-load factory dashboards
- Industrial Security: Role-Based Access Control (RBAC) with detailed audit logging

### What You Receive

- ☐ Custom Modular ERP (Inventory, Production, HR, & Payroll)
- ☐ Barcode/QR Code Integration for material tracking
- ☐ Live Factory Floor Monitoring Dashboard (Astro-powered)
- ☐ Automated PDF/Excel Reporting Engine (Celery-based)
- ☐ User Training Manuals & 90-Day Priority Support

### Technology Stack

Django Ninja | Python | Astro | PostgreSQL | Redis | Docker

---

# Service 05: Open-Source ERP & CRM Implementation

**05** Open-Source ERP & CRM Implementation

Enterprise-grade business management without the enterprise price tag.

| One-Time | Weekly | Timeline |
|---|---|---|
| $3,999 | $249/wk | 4–10 weeks |

### For Business Owners

Tired of expensive per-user licenses for Salesforce or SAP? I deploy and customize powerful open-source alternatives like ERPNext and Odoo. You get full control over your Accounting, HR, CRM, and Supply Chain on your own private cloud — with unlimited users and zero recurring license fees. Custom workflows automate emails, approvals, and reporting to streamline every business process.

- Unlimited Users: No more per-seat monthly billing
- 360° Business View: Integrated Accounting, Sales, and Warehouse management
- Total Ownership: You own your data and your software forever
- Custom Workflows: Automated triggers for emails, approvals, and reporting

### For Developers & CTOs

Expert deployment of the Frappe Framework and ERPNext ecosystem. Complex MariaDB/PostgreSQL configurations, Redis caching for Bench, and custom Python-based server scripts. Deployment is standardized via Docker for high availability and easy scaling. Expert ETL from Excel/Legacy systems into ERPNext with API integration for Shopify, WooCommerce, or Custom Apps.

- Frappe Framework Mastery: Custom DocTypes, Client Scripts, and Server Hooks
- High-Availability Deployment: Docker-based multi-tenant setups on Ubuntu VPS
- Seamless Data Migration: Expert ETL from Excel/Legacy systems into ERPNext
- API Integration: Connecting your ERP to Shopify, WooCommerce, or Custom Apps

### What You Receive

- ☐ Fully configured ERPNext/CRM instance on your VPS
- ☐ Secure SSL, Firewall, and Automated Backup System
- ☐ Customized Modules (Sales, Purchase, Inventory, Accounts)
- ☐ Employee Training & Role-Based Permission Setup
- ☐ Dockerized setup for easy future migrations
- ☐ 60-Day Post-Implementation Technical Audit

### Technology Stack

ERPNext | Frappe | Python | MariaDB | Redis | Docker

---

# Service 06: Algorithmic Trading & FinTech Automation

06

## Algorithmic Trading & FinTech Automation

High-precision trading systems for Forex, Crypto, and Global Markets.

| One-Time | Weekly | Timeline |
|---|---|---|
| $1,499 | $199/wk | 2–4 weeks |

### For Business Owners

Emotion is the enemy of trading. I build institutional-grade algorithmic systems that execute your strategies 24/7 with millisecond precision. Whether you trade Forex on MetaTrader 5 or Crypto on Binance, my systems handle

the execution, risk management, and data analysis so you can focus on the edge. Rigorous backtesting validates strategies against years of historical data.

- 24/7 Emotionless Execution: Eliminate human error and hesitation
- Multi-Platform Mastery: Seamlessly automate MT5, TradingView, and Binance
- Rigorous Backtesting: Validate strategies with Pandas against years of historical data
- Proactive Risk Guard: Automated stop-loss, trailing stops, and position sizing

### For Developers & CTOs

Engineered quantitative trading solutions using Python and MQL5. Specialization in low-latency WebSocket data streams, vectorized backtesting with Pandas, and cross-platform bridge development. Deployments are Dockerized for 99.9% uptime on Linux VPS environments with Redis-backed message queuing for multi-symbol strategies.

- MQL5 Expert Advisors: Professional-grade EA development for MetaTrader 5
- High-Frequency Data: Real-time market processing via Binance & TradingView WebSockets
- Distributed Architecture: Redis-backed message queuing for multi-symbol strategies
- Pine Script Mastery: Advanced TradingView indicators and strategy automation

### What You Receive

- Custom Trading Bot / Expert Advisor (EA) Source Code
- Vectorized Backtesting Report with Sharpe/Sortino Ratios
- Real-Time WebSocket Monitoring Dashboard
- Risk Management & Capital Preservation Module
- Dockerized Deployment on a Secured Cloud VPS
- Strategy Fine-Tuning & Optimization Session

### Technology Stack

Python | MQL5 | MetaTrader 5 | Binance API | Pandas | Redis | Docker

---

# Service 07: DevOps, Security & Cloud Hardening

| 07 | DevOps, Security & Cloud Hardening |
|---|---|

Bulletproof infrastructure with automated, zero-downtime deployments.

| One-Time | Weekly | Timeline |
|---|---|---|

| | | |
|---|---|---|
| $699 | $129/wk | 1–2 weeks |

### For Business Owners

Stop worrying about server crashes, data breaches, and deployment headaches. I build automated Self-Healing infrastructures that protect your business from hackers and ensure your updates launch perfectly every time without a second of downtime. Multi-layer protection using Cloudflare WAF and SSL, with automated daily backups and one-click server restoration for complete peace of mind.

- Zero-Downtime Launches: Deploy updates while customers are active
- Fortified Security: Multi-layer protection using Cloudflare WAF and SSL
- Disaster Recovery: Automated daily backups and 1-click server restoration
- Cost Optimization: Efficient VPS management to lower your monthly cloud bills

### For Developers & CTOs

Advanced DevOps orchestration specializing in Docker containerization and GitHub Actions for CI/CD. Implementation of Nginx reverse proxies, Cloudflare security layers, and automated vulnerability scanning to ensure server-side severity and compliance. Multi-stage GitHub Actions for Python/JS testing and deployment with standardized Docker environments for total portability.

- Automated CI/CD: Multi-stage GitHub Actions for Python/JS testing & deployment
- Containerization: Standardized Docker environments for total portability
- Nginx Excellence: High-performance reverse proxy and SSL/TLS hardening
- Edge Security: Cloudflare Zero Trust and Firewall Rule configuration

### What You Receive

- Dockerized Application Environment (Dev, Staging, Production)
- Automated GitHub Actions CI/CD Pipeline
- Cloudflare WAF & Security Hardening Setup
- Nginx Reverse Proxy & Auto-Renewing SSL
- Automated Off-site Backup & Recovery System
- Infrastructure Health Monitoring & Alerting Dashboard

### Technology Stack

Docker | GitHub Actions | Nginx | Cloudflare | VPS (Linux) | SSL/TLS

---

# Service 08: eCommerce Reliability & Server Maintenance

# 08 eCommerce Reliability & Server Maintenance

Zero-downtime maintenance for high-growth online stores.

| One-Time | Weekly | Timeline |
|---|---|---|
| $399 | $99/wk | Ongoing / Monthly |

## For Business Owners

Your online store is your 24/7 salesperson. If it slows down or crashes, you lose revenue instantly. I provide professional technical oversight for your eCommerce platform, ensuring your site remains fast, secure, and fully optimized so you can focus on scaling your sales while I handle the code. Priority emergency response if your server ever goes offline.

- Prevent Cart Abandonment: Optimized checkout speeds that keep customers buying
- Bulletproof Security: Regular patches and malware scans to protect customer data
- Automated Recovery: Daily off-site backups ensure your orders are never lost
- Peace of Mind: Priority emergency response if your server ever goes offline

## For Developers & CTOs

Proactive maintenance across WooCommerce, Shopify, and OpenCart environments. Deep PHP/Liquid optimization, database indexing for large product catalogs, and server-side performance tuning. Integration management via Amazon SP-API for automated inventory synchronization with 24/7 uptime monitoring and real-time alerting systems.

- WooCommerce Expert: Deep PHP/MySQL tuning and plugin compatibility audits
- Shopify Architecture: Liquid theme optimization and private app management
- Inventory Automation: Amazon SP-API integration for multi-channel sync
- Server Governance: Uptime monitoring, SSL management, and database vacuuming

## What You Receive

- Weekly Core, Theme, and Plugin/App Security Updates
- Automated Daily Off-site Backups & Recovery Testing
- 24/7 Uptime Monitoring with Real-time Slack/Email Alerts
- Database Performance Tuning & Asset Optimization
- Monthly Security Audit & Speed Benchmark Report
- Priority Technical Support for Site Emergencies

## Technology Stack

WooCommerce | Shopify | OpenCart | Amazon SP-API | PHP | Linux VPS

# Core Technology Stack

Below is the common technology stack that powers the majority of my service deliveries. These are battle-tested tools and frameworks that I use daily in production environments, selected for their reliability, performance, and community support. Each service may also include additional specialized technologies as detailed in its individual section.

| | | | |
|---|---|---|---|
| Python (Async) | Django Ninja | Gemma 4 (AI) | OpenClaw |
| Nuxt 3 | Astro | HTMX | PostgreSQL |
| Redis | Docker | MQL5 | Cloudflare |

Table 2: Common technology stack across all services.

# How to Get Started

Every engagement begins with a free consultation to understand your specific needs, current infrastructure, and business objectives. Here is what the typical process looks like from initial contact through project delivery and ongoing support.

### 1. Discovery Call

We start with a free 30-minute consultation where I learn about your business, current challenges, and goals. This helps me recommend the right service package and scope the project accurately.

### 2. Proposal & Agreement

Within 24 hours of our call, you receive a detailed proposal outlining the scope, deliverables, timeline, and transparent pricing. No hidden fees, no surprises.

### 3. Development & Delivery

I build your solution using agile sprints with regular progress updates. You have full visibility through demos at each milestone, ensuring the final product matches your vision.

### 4. Launch & Support

After delivery, I provide a thorough handover with documentation, training materials, and a defined support period. For ongoing services, we establish clear SLAs and communication channels.

# Let's Build Something Great

Whether you need a complete web application, an AI-powered automation system, or someone to optimize your existing infrastructure, I bring the expertise and reliability your business deserves. Every project is backed by production-grade engineering, transparent communication, and a commitment to delivering solutions that actually work in the real world.

| Email | Website | Upwork |
