Introduction

Thank you for reviewing my service catalog. This document provides a comprehensive overview of the professional services I offer, each designed to deliver measurable business value through modern engineering practices. With over 15 years of experience and 150+ projects delivered to clients worldwide, I bring a pragmatic, production-focused approach to every engagement.

My services span the full spectrum of modern software engineering: from self-hosted AI agents that eliminate recurring API costs, to high-performance backend optimization that scales systems to handle 10,000+ concurrent users, to custom ERP solutions that digitize manufacturing operations end-to-end. Each service is structured with clear deliverables, transparent pricing, and defined timelines so you know exactly what to expect before we begin.

Every service section in this catalog is written for two audiences: business owners who need to understand the value and ROI, and developers or CTOs who want to evaluate the technical approach. I believe in complete transparency – the technologies, architectures, and methodologies I use are all documented here.

Services at a Glance

#	Service	One-Time	Weekly	Timeline
01	Agentic AI & Enterprise RAG Infrastructure	\$1,499	\$299/wk	2-3 weeks
02	OpenClaw Web Interface & AI Model Integration	\$699	\$149/wk	7-10 days
03	Self-Hosted AI Agents (Zero API Costs)	\$599	\$149/wk	7-10 days
04	High-Performance Backend & Database Scaling	\$899	\$199/wk	1-2 weeks
05	Modern Full-Stack Web App Development	\$2,999	\$249/wk	4-8 weeks
06	Custom ERP & Manufacturing Automation	\$4,999	\$299/wk	8-12 weeks
07	Open-Source ERP & CRM Implementation	\$3,999	\$249/wk	4-10 weeks
08	Algorithmic Trading & FinTech Automation	\$1,499	\$199/wk	2-4 weeks
09	DevOps, Security & Cloud Hardening	\$699	\$129/wk	1-2 weeks
10	eCommerce Reliability & Server Maintenance	\$399	\$99/wk	7-10 days
11	Manufacturing ERP & Real-Time Production Tracking	\$2,499	\$499/wk	4-6 weeks
12	E-commerce Performance & Security Hardening	\$1,200	\$150/wk	7-10 days

Table 1: Complete service listing with pricing and delivery timelines. All prices in USD.

01 Agentic AI & Enterprise RAG Infrastructure

Turn static data into an autonomous workforce with secure RAG pipelines.

\$1,499
one-time

\$299
/week

Estimated
2-3 weeks

For Business Owners

Generic AI bots hallucinate and leak data. I build "Agentic" systems that act as expert employees. By using Retrieval-Augmented Generation (RAG), your AI only speaks from your private data, ensuring 100% accuracy and professional-grade security.

Private Data Intelligence: AI that knows your specific business docs perfectly

Autonomous Task Execution: Agents that can book meetings, update CRMs, or generate reports

Cost-Efficient Inference: Optimized model routing to slash your OpenAI/Anthropic monthly bills

Enterprise Security: On-premise or VPC-isolated deployment to keep your data private

For Developers & CTOs

Implementation of advanced RAG pipelines using LangChain/LlamaIndex and Vector Databases (Pinecone/Weaviate). I specialize in "Tool-Calling" logic where agents interact with your existing Django/FastAPI endpoints securely.

Vector Database Scaling: Optimized indexing for million-document retrieval

Semantic Chunking: Advanced NLP strategies to ensure high-relevancy AI context

Agentic Tool-Use: Enabling LLMs to execute Python functions and SQL queries safely

Observability & Evals: Integrated monitoring to track AI accuracy and latency

What You Receive

- Production-Ready Vector Database Setup
- Secure API Gateway for LLM Orchestration
- Custom Multi-Agent Workflow Design
- Evaluation Framework for AI Accuracy (Ragas/Giskard)
- 1-Month Performance & Hallucination Audit

Technology Stack

Python

LangChain

PostgreSQL (pg Redis

Docker

02

OpenClaw Web Interface & AI Model Integration

Deploy a hardened, web-accessible OpenClaw instance with multi-model AI logic.

\$699
one-time

\$149
/week

Estimated
7-10 days

For Business Owners

Standard OpenClaw setups are often restricted to a terminal or local machine. I deliver a ready-to-use, cloud-hosted OpenClaw environment accessible via a secure web interface. This includes pre-integrated AI models (GPT-4/Claude/Llama) and automated maintenance, allowing you to focus on results while I handle the infrastructure and security.

Secure Web Access: Manage your AI agents from any browser with encrypted logins

Turnkey AI Integration: Pre-configured API bridges for OpenAI, Anthropic, or local LLMs

Zero-Maintenance Hosting: I handle the server complexity, patches, and resource scaling

Full Data Sovereignty: Your setup, your keys, and your data – completely isolated and private

For Developers & CTOs

Deployment of a hardened OpenClaw Gateway using Docker-based sandboxing and Nginx reverse proxies. I implement complex model routing (A2A), SSL/TLS termination, and persistent volume management to ensure stateful conversation history and reliable agent execution across sessions.

Hardened Web Dashboard: Secure exposure of the OpenClaw UI with custom auth layers

Multi-Model Orchestration: Configurable Fallback/Primary model logic for 99.9% reliability

Isolated Sandboxing: Dockerized environments to prevent agent code-execution escapes

Persistent Database Storage: Integrated PostgreSQL/Redis for reliable session and memory logs

What You Receive

Encrypted Web-Accessible OpenClaw Dashboard

Hardened VPS Deployment (Nginx/Docker/Firewall)

API Key Orchestration & Multi-Model Config

Automated Weekly Backup & Security Update Script

Custom Integration Guide for Webhooks & Channels (Telegram/Slack)

Technology Stack

OpenClaw

Docker

Nginx (SSL)

PostgreSQL

Python/Node.js

Redis

03

Self-Hosted AI Agents (Zero API Costs)

Your private digital employee running 24/7 on your own server without subscriptions.

\$599

one-time

\$149

/week

Estimated
7-10 days

For Business Owners

A secure, 24/7 AI assistant that lives on your server. It handles SEO monitoring, market research, and customer inquiries using "Free" open-source models meaning no monthly bills from OpenAI or Claude.

Zero Monthly API Fees: Uses Gemma 4 E4B for high-tier reasoning at no extra cost

Complete Data Privacy: Your business data never leaves your private VPS

Autonomous SEO & Research: An agent that crawls the web and optimizes your site while you sleep

Scaling without Headcount: Automate repetitive Python/Django tasks and data entry

For Developers & CTOs

Production-grade deployment of Autonomous Agents using OpenClaw and Ollama. Features native tool-calling with Gemma 4, localized RAG, and seamless integration with Django/FastAPI backends.

Advanced Orchestration: OpenClaw gateway for multi-step task execution

Gemma 4 Native Function Calling: High-speed reasoning with 128K context window

Local Vector Search: Integrated RAG pipeline using ChromaDB/PostgreSQL pgvector

Secure Deployment: Dockerized environment with CloudPanel Reverse Proxy & SSL

What You Receive

Private AI Agent (OpenClaw) deployed on your VPS

Ollama Backend with Gemma 4 E4B optimized for 8GB+ RAM

Custom SEO & Web-Crawl skills integrated

Secure CloudPanel Dashboard for monitoring and logs

Handover guide for adding new business knowledge

Technology Stack

Gemma 4

OpenClaw

Ollama

Django/FastAPI

Docker

CloudPanel

04

High-Performance Backend & Database Scaling

Scale your infrastructure to 10K+ concurrent users with sub-50ms latency.

\$899

one-time

\$199

/week

Estimated
1-2 weeks

For Business Owners

Slow backends kill conversions. I transform sluggish systems into high-speed engines that handle massive traffic spikes without crashing. Using advanced asynchronous architecture, I ensure your business remains online and responsive 24/7.

Zero-Downtime Scaling: Handle 10x your current traffic effortlessly

Sub-50ms API Response: Instant page loads that keep customers engaged

Slashed Infrastructure Costs: Optimized resource usage reduces monthly VPS bills

Real-Time Reliability: Asynchronous task handling for smooth background processing

For Developers & CTOs

Architectural-level optimization of Python-based backends (Django/FastAPI). I implement non-blocking I/O, advanced PostgreSQL/MySQL indexing, and distributed task queues to eliminate bottlenecks and optimize server-side severity protocols.

Async Architecture: Transitioning sync blockers to High-Performance Async Python

Advanced Query Tuning: Deep EXPLAIN analysis for PostgreSQL and MySQL optimization

Distributed Task Management: Celery & Redis integration for heavy background logic

Real-Time WebSockets: Bi-directional communication using Django Channels

What You Receive

Comprehensive Backend Audit & Performance Benchmarks

Database Schema Refactoring & Strategic Indexing

Redis Caching & Celery Background Worker setup

Nginx Hardening & Dockerized Scaling Strategy

Post-Optimization Load Testing & Stability Report

Technology Stack

Python (Async)

PostgreSQL

Redis

Celery

Nginx

Docker

05

Modern Full-Stack Web App Development

High-performance applications built for speed, SEO, and massive scale.

\$2,999
one-time

\$249
/week

Estimated
4-8 weeks

For Business Owners

Generic websites are slow and lose customers. I build custom web applications from complex inventory portals to high-converting e-commerce engines using modern "Island Architecture." The result? Instant load times, perfect SEO scores, and a system that fits your business like a glove.

Ultra-Fast Performance: Optimized with Astro and HTMX for near-instant interaction

Built-in SEO Advantage: SSR and Static Generation ensure you rank higher on Google

Responsive & Modern UX: Beautifully crafted with TailwindCSS or Bootstrap for any device

Enterprise-Grade Reliability: Securely hosted on high-speed VPS using Docker isolation

For Developers & CTOs

Architecting sophisticated web ecosystems using Nuxt 3 and Astro for the frontend, powered by Alpine.js and HTMX for reactive, low-latency client-side logic. Deployment is handled via Dockerized microservices on optimized Linux VPS environments.

Hybrid Architecture: NuxtJS (Full SSR) and Astro (Island Architecture) for maximum speed

Lightweight Interactivity: Alpine.js & HTMX to eliminate heavy JavaScript bundles

State-of-the-Art Styling: Rapid UI development with TailwindCSS and Bootstrap 5

DevOps Excellence: Containerized deployment with Docker Compose on dedicated VPS

What You Receive

Complete Full-Stack Application (Frontend + Python/Node Backend)

High-Performance Database Design (PostgreSQL/MySQL)

Optimized UI/UX with TailwindCSS/Bootstrap

Dockerized Production Deployment on VPS with SSL

Post-Launch Performance Audit & SEO Optimization

45-Day Priority Technical Support

Technology Stack

NuxtJS

Astro

HTMX

Alpine.js

TailwindCSS

Docker

VPS

06

Custom ERP & Manufacturing Automation

Digital transformation for factories from production floor to final export.

\$4,999

one-time

\$299

/week

Estimated
8-12 weeks

For Business Owners

Ditch the messy spreadsheets. I build custom ERP systems designed specifically for manufacturing (Garments, Textiles, Industrial) that track raw materials, production stages, and worker efficiency in real-time. Gain 100% visibility over your factory floor from a single dashboard.

Eliminate Production Bottlenecks: Real-time tracking of every garment/unit stage

Smart Inventory Management: Automated low-stock alerts and QR-based tracking

Data-Driven Decision Making: One-click export of production and payroll reports

Reduced Operational Waste: Digital workflows that catch errors before they cost money

For Developers & CTOs

High-concurrency ERP architecture built with Django Ninja for lightning-fast API performance and Astro for real-time monitoring dashboards. Includes IoT sensor integration (MQTT), barcode/QR logic, and automated Celery tasks for heavy reporting.

Django Ninja Core: Type-safe, high-performance REST APIs with automatic OpenAPI docs

Real-time IoT Integration: Support for PLC, MQTT, and sensor-based production counting

Edge-Ready Frontend: Astro and Alpine.js for lightweight, instant-load factory dashboards

Industrial Security: Role-Based Access Control (RBAC) with detailed audit logging

What You Receive

Custom Modular ERP (Inventory, Production, HR, & Payroll)

Barcode/QR Code Integration for material tracking

Live Factory Floor Monitoring Dashboard (Astro-powered)

Automated PDF/Excel Reporting Engine (Celery-based)

User Training Manuals & 90-Day Priority Support

Technology Stack

Django Ninja

Python

Astro

PostgreSQL

Redis

Docker

Open-Source ERP & CRM Implementation

Enterprise-grade business management without the enterprise price tag.

\$3,999
one-time

\$249
/week

Estimated
4-10 weeks

For Business Owners

Tired of expensive per-user licenses for Salesforce or SAP? I deploy and customize powerful open-source alternatives like ERPNext and Odoo. You get full control over your Accounting, HR, CRM, and Supply Chain on your own private cloud with unlimited users and zero recurring license fees.

Unlimited Users: No more "per-seat" monthly billing

360 Business View: Integrated Accounting, Sales, and Warehouse management

Total Ownership: You own your data and your software forever

Custom Workflows: Automated triggers for emails, approvals, and reporting

For Developers & CTOs

Expert deployment of the Frappe Framework and ERPNext ecosystem. I handle complex MariaDB/PostgreSQL configurations, Redis caching for Bench, and custom Python-based server scripts. Deployment is standardized via Docker for high availability and easy scaling.

Frappe Framework Mastery: Custom DocTypes, Client Scripts, and Server Hooks

High-Availability Deployment: Docker-based multi-tenant setups on Ubuntu VPS

Seamless Data Migration: Expert ETL from Excel/Legacy systems into ERPNext

API Integration: Connecting your ERP to Shopify, WooCommerce, or Custom Apps

What You Receive

Fully configured ERPNext/CRM instance on your VPS

Secure SSL, Firewall, and Automated Backup System

Customized Modules (Sales, Purchase, Inventory, Accounts)

Employee Training & Role-Based Permission Setup

Dockerized setup for easy future migrations

60-Day Post-Implementation Technical Audit

Technology Stack

08

Algorithmic Trading & FinTech Automation

High-precision trading systems for Forex, Crypto, and Global Markets.

\$1,499
one-time

\$199
/week

Estimated
2-4 weeks

For Business Owners

Emotion is the enemy of trading. I build institutional-grade algorithmic systems that execute your strategies 24/7 with millisecond precision. Whether you trade Forex on MetaTrader 5 or Crypto on Binance, my systems handle the execution, risk management, and data analysis so you can focus on the edge.

24/7 Emotionless Execution: Eliminate human error and hesitation

Multi-Platform Mastery: Seamlessly automate MT5, TradingView, and Binance

Rigorous Backtesting: Validate strategies with Pandas against years of historical data

Proactive Risk Guard: Automated stop-loss, trailing stops, and position sizing

For Developers & CTOs

Engineered quantitative trading solutions using Python and MQL5. I specialize in low-latency WebSocket data streams, vectorized backtesting with Pandas, and cross-platform bridge development. Deployments are Dockerized for 99.9% uptime on Linux VPS environments.

MQL5 Expert Advisors: Professional-grade EA development for MetaTrader 5

High-Frequency Data: Real-time market processing via Binance & TradingView WebSockets

Distributed Architecture: Redis-backed message queuing for multi-symbol strategies

Pine Script Mastery: Advanced TradingView indicators and strategy automation

What You Receive

Custom Trading Bot / Expert Advisor (EA) Source Code
Vectorized Backtesting Report with Sharpe/Sortino Ratios
Real-Time WebSocket Monitoring Dashboard
Risk Management & Capital Preservation Module
Dockerized Deployment on a Secured Cloud VPS
Strategy Fine-Tuning & Optimization Session

Technology Stack

09

DevOps, Security & Cloud Hardening

Bulletproof infrastructure with automated, zero-downtime deployments.

\$699

one-time

\$129

/week

Estimated
1-2 weeks

For Business Owners

Stop worrying about server crashes, data breaches, and deployment headaches. I build automated "Self-Healing" infrastructures that protect your business from hackers and ensure your updates launch perfectly every time without a second of downtime.

Zero-Downtime Launches: Deploy updates while customers are active

Fortified Security: Multi-layer protection using Cloudflare WAF and SSL

Disaster Recovery: Automated daily backups and 1-click server restoration

Cost Optimization: Efficient VPS management to lower your monthly cloud bills

For Developers & CTOs

Advanced DevOps orchestration specializing in Docker containerization and GitHub Actions for CI/CD. I implement Nginx reverse proxies, Cloudflare security layers, and automated vulnerability scanning to ensure server-side security and compliance.

Automated CI/CD: Multi-stage GitHub Actions for Python/JS testing & deployment

Containerization: Standardized Docker environments for total portability

Nginx Excellence: High-performance reverse proxy and SSL/TLS hardening

Edge Security: Cloudflare Zero Trust and Firewall Rule configuration

What You Receive

Dockerized Application Environment (Dev, Staging, Production)

Automated GitHub Actions CI/CD Pipeline

Cloudflare WAF & Security Hardening Setup

Nginx Reverse Proxy & Auto-Renewing SSL

Automated Off-site Backup & Recovery System

Infrastructure Health Monitoring & Alerting Dashboard

Technology Stack

Docker

GitHub Actions

Nginx

Cloudflare

VPS (Linux)

SSL/TLS

10

eCommerce Reliability & Server Maintenance

Zero-downtime maintenance for high-growth online stores.

\$399
one-time

\$99
/week

Estimated
7-10 days

For Business Owners

Your online store is your 24/7 salesperson. If it slows down or crashes, you lose revenue instantly. I provide professional technical oversight for your eCommerce platform, ensuring your site remains fast, secure, and fully optimized so you can focus on scaling your sales while I handle the code.

Prevent Cart Abandonment: Optimized checkout speeds that keep customers buying

Bulletproof Security: Regular patches and malware scans to protect customer data

Automated Recovery: Daily off-site backups ensure your orders are never lost

Peace of Mind: Priority emergency response if your server ever goes offline

For Developers & CTOs

Proactive maintenance across WooCommerce, Shopify, and OpenCart environments. I specialize in PHP/Liquid optimization, database indexing for large product catalogs, and server-side performance tuning. Integration management via Amazon SP-API for automated inventory synchronization.

WooCommerce Expert: Deep PHP/MySQL tuning and plugin compatibility audits

Shopify Architecture: Liquid theme optimization and private app management

Inventory Automation: Amazon SP-API integration for multi-channel sync

Server Governance: Uptime monitoring, SSL management, and database vacuuming

What You Receive

Weekly Core, Theme, and Plugin/App Security Updates
Automated Daily Off-site Backups & Recovery Testing
24/7 Uptime Monitoring with Real-time Slack/Email Alerts
Database Performance Tuning & Asset Optimization
Monthly Security Audit & Speed Benchmark Report
Priority Technical Support for Site Emergencies

Technology Stack

WooCommerce

Shopify

OpenCart

Amazon SP-API PHP

Linux VPS

11

Manufacturing ERP & Real-Time Production Tracking

Digitize your shop floor with sub-second latency and automated reporting.

\$2,499
one-time

\$499
/week

Estimated
4-6 weeks

For Business Owners

Spreadsheets lead to human error and lost revenue. I build custom, high-speed ERP modules that track your production in real-time. From raw material inventory to final dispatch, get a God-eye view of your factory with automated alerts for bottlenecks.

Eliminate Manual Entry: Barcode/IoT integration for automated tracking

Real-Time Bottleneck Detection: Instant alerts when a production line slows down

Predictive Inventory: Automated re-ordering of materials based on production speed

Custom Dashboarding: High-level financial and operational reports for stakeholders

For Developers & CTOs

Building resilient, low-latency backends for industrial environments. I focus on "Offline-First" architecture so your factory keeps running even if the internet goes down, with background synchronization via Celery and RabbitMQ or Redis.

IoT Gateway Integration: Connecting hardware sensors to Django/Django-Ninja backends

Event-Driven Architecture: Using WebSockets for real-time shop floor updates

Relational Data Integrity: Complex schema design for multi-stage manufacturing

Edge Computing: Localized Docker nodes for ultra-low latency processing

What You Receive

Custom ERP/Production Tracking Web Dashboard

IoT/Scanner Integration Bridge

Automated PDF/Excel Reporting Engine

On-Site or Private Cloud Server Configuration

Operator & Manager Training Documentation

Technology Stack

Django

PostgreSQL

RabbitMQ

MQTT

12

E-commerce Performance & Security Hardening

Zero-lag shopping experience protected by enterprise-grade security.

\$1,200
one-time

\$150
/week

Estimated
7-10 days

For Business Owners

A 1-second delay in page load costs 7% in conversions. I transform standard OpenCart/WooCommerce stores into high-performance engines. Beyond speed, I harden your store against SQL injections, bot-driven price scraping, and checkout attacks.

Blazing Fast Speed: Achieved through advanced Varnish & Redis caching layers

Bot & Scraper Protection: Prevent competitors from stealing your pricing data

Fraud Prevention: Hardened checkout protocols to stop automated payment testing

SEO Ranking Boost: Faster sites rank higher on Google automatically

For Developers & CTOs

Advanced server-side optimization including Nginx vHost tuning, Varnish Cache policy writing, and Layer 7 Firewall (WAF) implementation. I focus on reducing TTFB (Time to First Byte) and securing the application layer.

Varnish VCL Customization: Strategic cache-purging for real-time inventory

Nginx Hardening: Implementation of rate-limiting and custom security headers

Database Query Optimization: Identifying and fixing slow JOINS in e-commerce schemas

SSL/TLS Performance: Modernizing cipher suites for faster, secure handshakes

What You Receive

Full Security & Performance Audit Report

Custom Varnish/Nginx Configuration Files

Cloudflare Enterprise-Level Firewall Rules

Automated Database Optimization Scripts

Post-Setup Load Testing (Simulating 5k+ shoppers)

Technology Stack

Nginx

Varnish

Redis

OpenCart/WooCo

Linux Hardening

Core Technology Stack

Below is the common technology stack that powers the majority of my service deliveries. These are battle-tested tools and frameworks that I use daily in production environments, selected for their reliability, performance, and community support. Each service may also include additional specialized technologies as detailed in its individual section.

Python (Async)	Django Ninja	Gemma 4 (AI)	OpenClaw
Nuxt 3	Astro	HTMX	PostgreSQL
Redis	Docker	MQL5	Cloudflare

Table 2: Common technology stack across all services.

How to Get Started

Every engagement begins with a free consultation to understand your specific needs, current infrastructure, and business objectives. Here is what the typical process looks like from initial contact through project delivery and ongoing support.

01

Discovery Call

We start with a free 30-minute consultation where I learn about your business, current challenges, and goals. This helps me recommend the right service package and scope the project accurately.

02

Proposal & Agreement

Within 24 hours of our call, you receive a detailed proposal outlining the scope, deliverables, timeline, and transparent pricing. No hidden fees, no surprises.

03

Development & Delivery

I build your solution using agile sprints with regular progress updates. You have full visibility through demos at each milestone, ensuring the final product matches your vision.

04

Launch & Support

After delivery, I provide a thorough handover with documentation, training materials, and a defined support period. For ongoing services, we establish clear SLAs and communication channels.

Let's Build Something Great

Whether you need a complete web application, an AI-powered automation system, or someone to optimize your existing infrastructure, I bring the expertise and reliability your business deserves. Every project is backed by production-grade engineering, transparent communication, and a commitment to delivering solutions that actually work in the real world.

Email me@hrdnsh.com
